

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

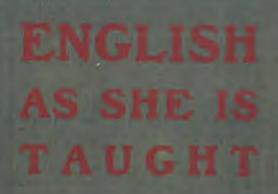

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

BIOGRAPHICAL SKETCH.

Samuel Langhorne Clemens (Mark Twain), the greatest living humorist, was born in Florida, Mo., November 30, 1835, and educated in the public schools of Hannibal, Mo., where the family moved soon after his birth. Apprenticed to a printer at the age of thirteen, his first attempt at writing was as assistant editor of the Hannibal Courier. His adventurous ambition soon outgrew the frontier town of his boyhood, and when about eighteen years old, he set out on the famous wanderings that were to make him a distinguished citizen of the world. At this time he journeyed to New York, Philadelphia, Cincinnati, and St. Louis, in each city working for a while at his trade as a printer. Roving westward again in 1857, he became a licensed pilot on the Mississippi river, following this arduous occupation for three years and, unconsciously, perhaps, storing up the rich material used years afterwards in the very successful book, "Life on the Mississippi." The experience as a pilot undoubtedly suggested his famous nom de plume "Mark Twain," this being the leadsman's call for two fathoms.

At the outbreak of the war he served a few weeks in the Confederate army under General Harris, and upon resigning, he explained that he had become "incapacitated by fatigue caused by persistent retreating."

His next important efforts were in 1861 as territorial secretary of Nevada, and in 1862 as editor of the Virginia City (Nev.) Enterprise, where he remained two years, resigning to accept a position on the San Francisco Morning Call. In 1865 he engaged for a time in mining in California.

Mark Twain scored his first considerable success in a series of brilliant letters written during a visit to the Hawaiian Islands in 1866. These letters, later incorporated in "Roughing It," were so favorably received that on his return he lectured with marked success in California, Nevada, and Eastern states. The passion for travel spurring him on, in 1867, with a party, he visited France, Italy, and Palestine, and published "Innocents Abroad," an account of the trip, which at once gained for him an international reputation which has never waned. In 1870 he married Miss Langdon of Elmira. N.Y., and assumed the editorship of the Buffalo Express, of which he was part proprietor. Soon after he retired from journalism to devote

WORKS OF MARK TWAIN.

The Celebrated Jumping Frog of Calaveras County, 1867.

The Innocents Abroad, 1869.

Roughing It, 1872.

Sketches New and Old, 1873.

The Gilded Age, (with Charles Dudley Warner,) 1873.

Adventures of Tom Sawyer, 1876.

A Tramp Abroad, 1880.

The Prince and the Pauper, 1882.

The Stolen White Elephant, 1882.

Life on the Mississippi, 1883.

Adventures of Huckleberry Finn, 1885.

A Connecticut Yankee at King Arthur's Court, 1889.

Merry Tales, 1892.

The American Claimant, 1892.

The £1,000,000 Bank Note and Other New Sketches, 1803.

Tom Sawyer Abroad, 1894.

The Tragedy of Pudd'nhead Wilson, 1894.

Joan of Arc, 1896.

More Tramps Abroad, 1897; and The Man that Corrupted Hadleyburg and other Stories and Essays, 1900.

This list excludes several minor publications.

ENGLISH AS SHE IS TAUGHT.

In the appendix to Crocker's Boswell's Johnson, one finds this anecdote:

Cato's Soliloquy.—One day Mrs. Gastrel set a little girl to repeat to him (Doctor Samuel Johnson) Cato's Soliloquy, which she went through very correctly.

The Doctor, after a pause, asked the child—

"What was to bring Cato to an end?"

She said it was a knife.

"No, my dear, it was not so."

"My aunt Polly said it was a knife."

"Why, Aunt Polly's knife may do, but it was a dagger my dear."

He then asked her the meaning of "bane and antidote," which she was unable to give. Mrs. Gastrel said—

"You cannot expect so young a child to know the meaning of such words."

He then said -

"My dear, how many pence are there in sixpence?"

"I cannot tell, sir," was the half-terrified reply. On this, addressing himself to Mrs. Gastrel, he said —

"Now, my dear lady, can anything be more ridiculous than to teach a child Cato's Soliloquy, who doos not know how many pence there are in sixpence?"

In a lecture before the Royal Geographical Society, Professor Ravenstein quoted the following list of frantic questions, and said that they had been asked in an examination:

Mention all the names of places in the world derived from Julius Cæsar or Augustus Cæsar.

Where are the following rivers: Pisuerga, Sa-

karia, Guadalete, Jalon. Mulde?

All you know of the following: Machacha, Pilmo, Schebulos, Crivoscia, Basecs, Mancikert, Taxhen, Citeaux, Meloria, Zutphen.

The highest peake of the Karakorum range.

The number of universities in Prussia.

Why are the tops of mountains continually covered with snow (sic)?

Name the length and breadth of the streams of lava which issued from the Skaptar Jokul in the eruption of 1783.

That list would oversize nearly anybody's geographical knowledge. Isn't it reasonably possible that in our schools many of the questions in all studies are several miles ahead of where the pupil is?—that he is set to struggle with things that are ludicrously beyond his present reach, hopelessly beyond his present strength? This remark in passing, and by way of text; now I come to what I was going to say.

I have just now fallen upon a darling literary curiosity. It is a little book, a manuscript compilation, and the compiler sent it to me with the request that I say whether I think it ought to be published I said, Yes; but as I slowly grow wise, I briskly grow cautious; and so, now that the publication is imminent, it has seemed to me that I should feel more comfortable if I could divide up this responsibility with the public by adding them to the court. Therefore I will print some extracts from the book, in the hope that they may make converts to my judgment that the volume has merit which entitles it to publication.

As to its character: Every one has sampled "English as She is Spoke," and "English as She is Wrote"; this little volume furnishes us an instructive array of examples of "English as She is Taught"—in the public schools of—well, this country. The collection is made by a teacher in those schools, and all the examples in it are genuine; none of them have been tampered with, or doctored in any way. From time to time, during several years, whenever a pupil has delivered himself of anything

peculiarly quaint or toothsome in the course of his recitations, this teacher and her associates have privately set this thing down in a memorandum-book, strictly following the original as to grammar, construction, spelling, and all; and the result

is this literary curiosity.

The contents of the book consist mainly of answers given by the boys and girls to questions, said answers being given sometimes verbally, sometimes in writing. The subjects touched upon are fifteen in number: I. Etymology; II. Grammar; III. Mathematics; IV. Geography; V. "Original"; VI. Analysis; VII. History; VIII. "Intellectual"; IX. Philosophy; X. Physiology; XI. Astronomy; XII. Politics; XIII. Music; XIV. Oratory; XV. Metaphysics.

You perceive that the poor little young idea has taken a shoot at a good many kinds of game in the course of the book. Now as to results. Here are some quaint definitions of words. It will be noticed that in all of these instances the sound of the word, or the look of it on paper, has

misled the child:

Aborigines, a system of mountains.

Alias, a good man in the Bible. Amenable, anything that is mean. Assiduity, state of being an acid. Auriferous, pertaining to an orifice. Ammonia, the food of the gods. Capillary, a little caterpillar. Corniferous, rocks in which fossil corn is found. *Emolument*, a headstone to a grave. Equestrian, one who asks questions. Eucharist, one who plays uchre. Franchise, anything belonging to the French. Idolater, a very idol person. Ipecac, a man who likes a good dinner. Irrigate, to make fun of. Mendacious, what can be mended. Mercenary, one who feels for another. Parasite, a kind of umbrella. Parasite, the murder of an infant. Publican, a man who does his prayers in public. Tenacious, ten acres of land.

Here is one where the phrase "publicans and sinners" has got mixed up in the child's mind with politics, and the result is a definition which takes one in a sudden and unexpected way:

Republican, a sinner mentioned in the Bible.

Also in Democratic newspapers now and then. Here are two where the mistake has resulted from sound assisted by remote fact: Plagiarist, a writer of plays.

Demagogue, a vessel containing beer and other liquids.

I cannot quite make out what it was that misled the pupil in the following instances; it would not seem to have been the sound of the word, nor the look of it in print:

Asphyxia, a grumbling, fussy temper.

Quarternions, a bird with a flat beak and no bill, living in New Zealand.

Quarternions, the name given to a style of art practiced by the Phoenicians.

Quarternions, a religious convention held every hundred years.

Sibilant, the state of being idiotic. Crosier, a staff carried by the Deity.

In the following sentences the pupil's ear has been deceiving him again:

The marriage was illegible.

He was totally dismasted with the whole performance,

He enjoys riding on a philosopher. She was very quick at repertoire. He prayed for the waters to subsidize. The leopard is watching his sheep. They had a strawberry vestibule.

Here is one which—, well now, how often we do slam right into the truth without ever suspecting it: The men employed by the Gas Company go round and speculate the meter.

Indeed they do, dear; and when you grow up, many and many's the time you will notice it in the gas bill. In the following sentences the little people have some information to convey, every time; but in my case they failed to connect; the light always went out on the keystone word:

The coercion of some things is remarkable, as bread and molasses.

Her hat is contiguous because she wears it on one side.

He preached to an egregious congregation.

The captain eliminated a bullet through the man's heart.

You should take caution and be precarious.

The supercilious girl acted with vicissitude when the perennial time came.

That last is a curiously plausible sentence; one seems to know what it means, and yet he knows all the time that he doesn't. Here is an odd (but entirely proper) use of a word, and a most sudden descent from a lofty philosophical altitude to a very practical and homely illustration:

We should endeavor to avoid extremes—like those of wasps and bees.

And here—with "zoölogical" and "geological" in his mind, but not ready to his tongue—the small scholar has innocently gone and let out a couple of secrets which ought never to have been divulged in any circumstances:

There are a good many donkeys in theological gardens.

Some of the best fossils are found in the theological cabinets,

Under the head of "Grammar" the little scholars furnish the following information:

Gender is the distinguishing nouns without regard to sex.

A verb is something to eat.

Adverbs should always be used as adjectives and adjectives as adverbs.

Every sentence and name of God must begin with a caterpillar.

"Caterpillar" is well enough, but capital letter would have been stricter. The following is a brave attempt at a solution, but it failed to liquify:

When they are going to say some prose or poetry before they say the poetry or prose they must put a semicolon just after the introduction of the prose or poetry.

The chapter on "Mathematics" is full of fruit. From it I take a few samples—mainly in an unripe state:

A straight line is any distance between two places.

Parallel lines are lines that can never meet until

they run together.

A circle is a round straight line with a hole in the middle.

Things which are equal to each other are equal

to anything else.

To find the number of square feet in a room you multiply the room by the number of the feet. The product is the result.

Right you are. In the matter of geography this little book is unspeakably rich. The questions do not appear to have applied the microscope to the subject, as did those quoted by Professor Ravenstein; still, they proved plenty difficult enough without that. These pupils did not hunt with a microscope, they hunted with a shot-gun; this is shown by the crippled condition of the game they brought in:

America is divided into the Passiffic slope and the Mississippi valey.

North America is separated by Spain.

America consists from north to south about five hundred miles.

sorrow, the young deer made imperfect who worked hard filtered in sight.

I see, now, that I never understood that poem before. I have had glimpses of its meaning, in moments when I was not as ignorant with weariness as usual, but this is the first time the whole spacious idea of it ever filtered in sight. If I were a public school pupil I would put those other studies aside and stick to analysis; for, after all, it

is the thing to spread your mind.

We come now to historical matters, historical remains, one might say. As one turns the pages, he is impressed with the depth to which one date has been driven into the American child's head—1492. The date is there, and it is there to stay. And it is always at hand, always deliverable at a moment's notice. But the Fact that belongs with it? That is quite another matter. Only the date itself is familiar and sure: its vast Fact has failed of lodgment. It would appear that whenever you ask a public-school pupil when a thing—anything, no matter what—happened, and he is in doubt, he always rips out his 1492. He applies it to everything, from the landing of the ark to the introduction of the horse-car. Well, after all, it is our first date, and so it is right enough to honor it, and pay the public schools to teach our children to honor it:

George Washington was born in 1492.

Washington wrote the Declareation of Independence in 1492.

St. Bartholemew was massacred in 1492.

The Brittains were the Saxons who entered England in 1492 under Julius Cæsar.

The earth is 1492 miles in circumference.

To proceed with "History":

Christopher Columbus was called the father of

his Country.

Queen Isabella of Spain sold her watch and chain and other millinery so that Columbus could discover America.

The Indian wars were very desecrating to the

country.

The Indians pursued their warfare by hiding in

the bushes and then scalping them.

Captain John Smith has been styled the father of his country. His life was saved by his daughter Pochahantas.

The Puritans found an insane asylum in the wilds of America.

The Stamp Act was to make everybody stamp all materials so they should be null and void.

Washington died in Spain almost brokenhearted. His remains were taken to the cathedral in Havana. Gorilla warfare was where men rode on gorillas. John Brown was a very good insane man who tried to get fugitives slaves into Virginia. He captured all the inhabitants, but was finally conquered and condemned to his death. The Confederacy was formed by the fugitive slaves.

Alfred the Great reigned 872 years. He was distinguished for letting some buckwheat cakes

burn, and the lady scolded him.

Henry Eight was famous for being a great

widower haveing lost several wives.

Lady Jane Gray studied Greek and Latin and was beheaded after a few days.

John Bright is noted for an incurable disease.

Lord James Gordon Bennett instigated the Gordon Riots.

The Middle Ages come in between antiquity

and prosterity.

Luther introduced Christianity into England a good many thousand years ago. His birthday was November 1883. He was once a Pope. He lived at the time of the Rebellion of Worms.

Julius Cæsar is noted for his famous telegram

dispatch, I came I saw I conquered.

Julius Cæsar was really a very great man. He was a very great soldier and wrote a book for beginners in the Latin.

Cleopatra was caused by the death of an asp

which she dissolved in a wine cup.

The only form of government in Greece was a limited monkey.

The Persian war lasted over 500 years.

Greece had only 7 wise men.

Socrates —— destroyed some statues and had to drink Shamrock.

Here is a fact correctly stated; and yet it is phrased with such ingenious infelicity that it can be depended upon to convey misinformation every time it is uncarefully read:

By the Salic law no woman or descendant of a woman could occupy the throne.

To show how far a child can travel in history with judicious and diligent boosting in the public school, we select the following mosaic:

Abraham Lincoln was born in Wales in 1599.

In the chapter headed "Intellectual" I find a great number of most interesting statements. A sample or two may be found not amiss:

Bracebridge Hall was written by Henry Irving. Snow Bound was written by Peter Cooper.

The House of the Seven Gables was written by Lord Bryant.

Edgar A. Poe was a very curdling writer.

Cotton Mather was a writer who invented the cotton gin and wrote histories.

Beowulf wrote the Scriptures.

Ben Johnson survived Shakespeare in some respects.

In the Canterbury Tale it gives account of King Alfred on his way to the shrine of Thomas Bucket.

Chaucer was the father of English pottery.

Chaucer was a bland verse written of the third century.

Chaucer was succeeded by H. Wads. Long-fellow, an American writer. His writings were chiefly prose and nearly one hundred years elapsed.

Shakspere translated the Scriptures and it was called St. James because he did it.

In the middle of the chapter I find many pages of information concerning Shakspere's plays, Milton's works, and those of Bacon, Addison, Samuel Johnson, Fielding, Richardson, Sterne, Smollett, De Foe, Locke, Pope, Swift, Goldsmith, Burns, Cowper, Wordsworth, Gibbon, Byron, Coleridge, Hood, Scott, Macaulay, George Eliot, Dickens, Bulwer, Thackery, Browning, Mrs. Browning, Tennyson, and Disraeli,—a fact which shows that into the restricted stomach of the public-school pupil is shoveled every year the blood, bone, and viscera of a gigantic literature, and the same is there digested and disposed of in a most successful and characteristic and gratifying public-school way. I have space but for a trifling few of the results:

Lord Byron was the son of an heiress and a drunken man.

Wm. Wadsworth wrote the Barefoot Boy and

Lord Byron was the son of an heiress and a drunken man.

Wm. Wadsworth wrote the Barefoot Boy and Imitations on Immortality.

Gibbon wrote a history of his travels in Italy.

This was original.

George Eliot left a wife and children who

mourned greatly for his genius.

George Eliot Miss Mary Evans Mrs. Cross Mrs. Lewis was the greatest female poet unless George Sands is made an exception of.

Bulwell is considered a good writer.

Sir Walter Scott Charles Bronte Alfred the Great and Johnson were the first great novelists.

Thomas Babington Makorlay graduated at Harvard and then studied law, he was raised to the peerage as baron in 1557 and died in 1776.

Here are two or three miscellaneous facts that may be of value, if taken in moderation:

Homer's writings are Homer's Essays Virgil the Aneid and Paradise lost some people say that these poems were not written by Homer but by another man of the same name.

A sort of sadness kind of shone in Bryant's poems.

Holmes is a very profligate and amusing writer.

When the public-school pupil wrestles with the political features of the great Republic, they throw him sometimes:

A bill becomes a law when the president vetos it.

The three departments of the government is the President rules the world, the governor rules the State, the mayor rules the city.

The first conscientious Congress met in Phila-

delphia.

The Constitution of the United States was established to ensure domestic hostility.

Truth crushed to earth will rise again. As follows:

The Constitution of the United States is that part of the book at the end which nobody reads.

And here she rises once more and untimely. There should be a limit to public-school instruction; it cannot be wise or well to let the young find out everything:

Congress is divided into civilized half civilized and savage.

Here are some results of study in music and oratory:

An interval in music is the distance on the keyboard from one piano to the next.

A rest means you are not to sing it.

Emphasis is putting more distress on one word than another.

The chapter on "Physiology" contains much that ought not to be lost to science:

Physillogigy is to study about your bones stummick and vertebry.

Occupations which are injurious to health are carbolic acid gas which is impure blood.

We have an upper and a lower skin. The lower skin moves all the time and the upper skin moves when we do.

The body is mostly composed of water and about one half is avaricious tissue.

The stomach is a small pear-shaped bone situated in the body.

The gastric juice keeps the bones from creaking.
The Chyle flows up the middle of the backbone
and reaches the heart where it meets the oxygen
and is purified.

The salivary glands are used to salivate the body.

In the stomach starch is changed to cane sugar and cane sugar to sugar cane.

The olfactory nerve enters the cavity of the orbit and is developed into the special sense of hearing

The growth of a tooth begins in the back of the mouth and extends to the stomach.

If we were on a railroad track and a train was coming the train would deafen our ears so that we couldn't see to get off the track.

If, up to this point, none of my quotations have added flavor to the Johnsonian anecdote at the head of this article, let us make another attempt:

The theory that intuitive truths are discovered

by the light of nature originated from St. John's interpretation of a passage in the Gospel of Plato.

The weight of the earth is found by comparing a mass of known lead with that of a mass of unknown lead.

To find the weight of the earth take the length of a degree on a meridian and multiply by 62½ pounds

The spheres are to each other as the squares of

their homologous sides.

A body will go just as far in the first second as the body will go plus the force of gravity and that's equal to twice what the body will go.

Specific gravity is the weight to be compared weight of an equal volumn of or that is the weight of a body compared with the weight of an equal volumn.

The law of fluid pressure divide the different forms of organized bodies by the form of attraction and the number increased will be the form.

Inertia is that proberty of bodies by virtue of which it cannot change its own condition of rest or motion. In other words it is the negative quality of passiveness either in recoverable latency or insipient latescence.

If a laugh is fair here, not the struggling child, nor the unintelligent teacher,—or rather the unintelligent Boards, Committees, and Trustees,—are the proper target for it. All through this little book one detects the signs of a certain probable fact—that a large part of the pupil's "instruction" con-

sists in cramming him with obscure and wordy "rules" which he does not understand and has no time to understand. would be as useful to cram him with brickbats; they would at least stay. In a town in the interior of New York, a few days ago, a gentleman set forth a mathematical problem and proposed to give a prize to every public-school pupil who should furnish the correct solution of it. Twenty-two of the brightest boys in the public schools entered the contest. The problem was not a very difficult one for pupils of their mathematical rank and standing, yet they all failed - by a hair—through one trifling mistake or an-Some searching questions asked, when it turned out that these lads were as glib as parrots with the "rules," but could not reason out a single rule or explain the principle underlying it. Their memories had been stocked, but not their understandings. It was a case of brickbat culture, pure and simple.

There are several curious "compositions" in the little book, and we must make room for one. It is full of naivete, brutal truth, and unembarrassed directness, and is the

funniest (genuine) boy's composition I think I have ever seen:

ON GIRLS.

Girls are very stuckup and dignefied in their manner and be have your. They think more of dress than anything and like to play with dowls and rags. They cry if they see a cow in a far distance and are atraid of guns. They stay at home all the time and go to church on Sunday. They are al-ways sick. They are al-ways funy and making fun of boy's hands and they say how dirty. They cant play marbles. I pity them poor things. They make fun of boys and then turn round and love them. I dont beleave they ever kiled a cat or anything. They look out every nite and say oh ant the moon lovely. Thir is one thing I have not told and that is they al-ways now their lessons bettern boys.

From Mr. Edward Channing's recent article in "Science":

The marked difference between the books now being produced by French, English, and American travelers, on the one hand, and German explorers on the other, is too great to escape attention. That difference is due entirely to the fact that in school and university the German is taught, in the first place to see, and in the second place to understand what he does see.

Mark Twain.

New Publications.

My Book Regord and Guide.

This book has been indorsed by all literary publications and educational teachers as the one book to assist book lovers or any reader of books to keep a record of books read, recommended, wanted, and loaned. It also contains a list of of the best 600 books worth reading. Handsomely bound in cloth, 192 Pages. Price \$1.00

Funny Epitaphs.

By ARTHUR WENTWORTH EATON.

This collection comprises an assortment of quaint and funny epitaphs selected from the many thousands of such from cemeteries all over the world. A unique book. Handsomely bound in cloth. . . Price 75c.

The Tribune Primer.

By EUGENE FIELD.

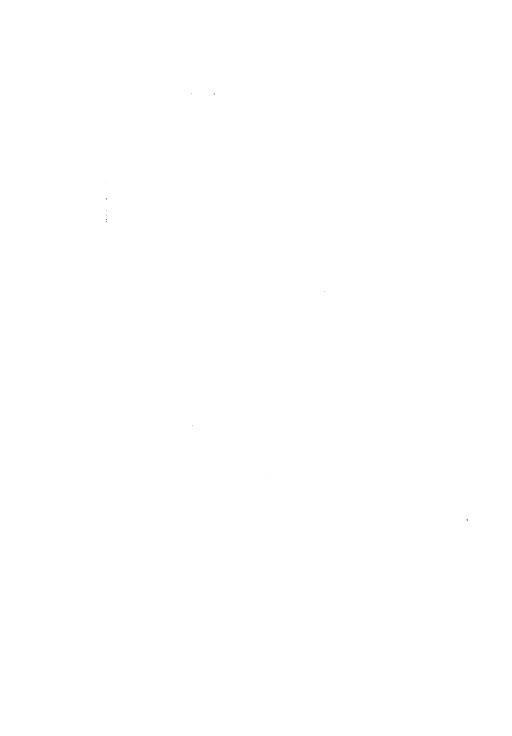

His first book, published in 1882, of which only 50 copies were printed, a copy recently sold at \$125.00. We have now ready a special edition, printed on fine laid paper, deckled edge, bound in artistic cloth.

Price 25c.

For sale by all Booksellers or sent post-paid on receipt of price,
